Deploying a Survey or Test

In the Course Menu click on the area where you want to put the test or survey. (Yours may look different than this one as you can add and remove content areas.) I’ve added a content area just for Quizzes.

Click on Evaluate to drop down the menu and click on either Create Test or Create Survey.
Any surveys or tests that aren’t deployed will be displayed here. Highlight the one that you want to deploy and click the Submit button. If this were a test, wherever you see the word Survey it would say Test.

You’ll see a success message.

Now you will set up how you want the Test to run. The next pages will talk about options for Tests and Surveys.
