Open to all current BU students, alumni, non-BU students and members of industry, non-profit and government agencies.

Lean Six Sigma Green Belt Training

November 19, 2018– January 20, 2019
via Distance Learning

Lean Six Sigma is a combined process-improvement methodology that accelerates processes, increases efficiency, and reduces or eliminates variation. Competition for customers is increasing throughout the corporate world, putting company profits on the line. In addition, customers' expectations are changing rapidly as the rate of information increases and costs are escalating. Now more than ever, achieving process excellence is essential.

Our Lean Six Sigma program gives you valuable business tools to achieve process excellence and help your team:

- Redesign flow to better account for customer and supplier variability
- Analyze the root causes of process or system problems
- Make informed decisions about cost-benefit of a company project
- Capture meaningful metrics to help know and grow your business
- Experiment to determine best practices to deliver quality, every time

This course is a rebroadcast of the Winter 2018 Lean Six Sigma Green Belt (LSSGB) program, offered by the Systems Science and Industrial Engineering (SSIE) Department at Binghamton University. Pre-requisite statistics instruction also offered.

Register by November 12, 2018 to avoid late fee!
