

#### Job description:

Fanatics needs you! You are a talented Software Engineer who is passionate designing and writing code. You thrive at turning ideas into a product and clearing technical hurdles. You are a flexible technologist who knows that there isn't one tool for all problems. You also are hungry to learn new technologies and apply them to difficult problems. You will be part of a Platform team that builds platforms, frameworks and Libraries for other Application developers across the company to build their applications.

#### Responsibilities:

- Develop back-end applications which involves technology stacks like Kafka, Cassandra, Elastic Search, Springboot etc
- Comfort building early POC's to products that reach millions of users.
- Accurately estimating completion of deliverables.
- Integrating API's from internal and external teams.
- Evangelize you and your team's work
- A passion for simplified design Qualifications
- Internship or some prior experience preferred
- Strong in programming languages like Java. Knowing Python & GO is a big plus
- Detail-oriented, with excellent analytical, technical and problem solving skills
- Ability to thrive in a fast paced and dynamic environment
- Experience with Cassandra is a big plus
- Bachelor's degree in CS required (Master's preferred)
